A high performance strain sensor array is fabricated by digital light processing technology, with a sensitivity of 8.939 and a linearity up to 45% strain. Numerical simulation and impedance study indicate that the sensor works on the deformation-induced reduction of active material conductive pathway.

This special volume is part 2 of a mini-series on, "Materials Manufacturing Science and Technology XII". It covers three topics: Modern design theory & methodology, MEMS & nanotechnology, Materials science & technology in manufacturing. Presented here is a collection of 125 papers selected from over 510 papers originally submitted by universities and industrial concerns all over the world.

Materials Advances is an international, gold open access journal, publishing good quality research across the breadth of materials science. Free to read, and free to publish in, the journal builds on and complements the materials research published in the Royal Society of Chemistry journal portfolio .

Materials Advances - Royal Society of Chemistry

Advances in powder metallurgy explores a range of materials and techniques used for powder metallurgy and the use of this technology across a variety of application areas. Part one discusses the forming and shaping of metal powders and includes chapters on atomisation techniques, electrolysis and plasma synthesis of metallic nanopowders.
