Concrete Culvert Design And Detailing

A culvert is a closed conduit under a roadway or embankment used to maintain flow from a natural channel or drainage ditch. A culvert shall convey flow without causing damaging backwater, excessive flow constriction, or excessive outlet velocities. In addition to determining the design flows and corresponding hydraulic performance of

DEFINITIONS Apron Wall- Also known as a cutoff wall; a vertical non-structural concrete wall built across the full width of the ends of box culverts and extending below the level of the bottom slab. Bar Mass- The mass of a reinforcing bar per unit length (kg/m).

CONCRETE CULVERT DESIGN AND DETAILING MANUAL

Considering where box culverts are used, the environmental benefits of precast concrete make it the perfect solution for stream and other crossings. Built to last close to a century, precast concrete won't bend or rust like steel and is much stronger than plastic. This means once the culvert is in place, little to no maintenance is required.

Precast concrete box culverts range in size from 3 ft. x 2 ft. to 12 ft. x 12 ft., where the first number is the clear span and the second number is the rise, or clear height. The designs and details for these culverts are dictated by ASTM C1577 and Bureau of Design and Environment Special Provision.

Culvert Manual

For a reinforced concrete box culvert, the Preliminary Bridge Design Unit will set the height and opening width for one to three box culvert barrels, as well as the inlet and outlet components. Inlet and outlet components are intended to control water flow and sediment and to prevent erosion or scour.

TABLE OF CONTENTS ~ CULVERT DESIGN

In this paper we also study about design of box culvert and comparative study of reinforcement details. Vent size of the culvert is fixed based on flood discharge from upstream side. Clear dimensions of the box culvert is 3mX3m. Thickness of slab is 400mm. Grade of concrete is M30, grade of steel is Fe415 and angle of repose is 300.
