sequence—that is, the prediction of its folding and its secondary and tertiary structure from its primary structure. Structure prediction is fundamentally different from the inverse problem of protein design.

Protein structure prediction - Wikipedia

Protein structure prediction is a fast-growing research field with applications to biotechnology [36–38]. Current experimental techniques for resolving protein structure through X-ray crystallography or NMR spectroscopy are laborious and thus can solve only a small fraction of proteins sequenced by large-scale genome sequencing endeavors.
